

Testimonial: PCA Electronics Test Ltd

PCA Electronic Test Ltd. Supports the Defence community in testing the Electronic Warfare and Defensive Aids Sub Systems for a number of aircraft systems (e.g. Typhoon, Tornado, Hercules, Harrier, Sea King Mk4...) and also provides System, Software and Security advice to a number of Project Teams whilst working closely with the MoD Accreditors of the Defence Security & Assurance Service (DSAS). The end-to-end testing is done using PCA's developed test equipment.

PCA won its first contract seven years ago and since then has been improving its methodologies and test devices. Miniaturisation is of particular importance for helicopter operations where the infrastructure can be limited in the field.

Chris Pyemont, Senior Manager and Gav Pearson, Security Consultant at PCA, have been FlagStone users for 6 years and are now looking forward to the new Eclipt family.

“Security of data at rest is extremely important for us and our clients, given the sensitive nature of the data handled by the systems tested” said Chris Pyemont.

“A few years ago, PCA did an independent evaluation of throughput performance of various encryption solutions (hardware and software based). Hardware encryption came first by far. Since then, FlagStone Baseline and Enhanced products were used by ourselves and also recommended to our clients” added Gav Pearson.

PCA has recently ordered Eclipt Enhanced and Eclipt Baseline drives for their own laptops and has now deployed the drives to their own staff. “We trust the Stonewood products to meet our strict security requirements” said Chris. “We are now looking forward to the new Solid State based products that Stonewood is working on”, Chris continued.

For more information on Stonewood's Defence solutions (both encryption products and bespoke security systems), see www.stonewood.co.uk, or Email info@stonewood.co.uk.
